Executive summary

Build an Understatement-specific managed merchandise and size-planning workspace using the same eight-product, 85-variant collaboration foundation. The management question is what fit demand is hidden inside broad alpha sizes, and what it should change in the next size curve.

The hero sequence explains M composition, three commercial demand curves, L-to-M fit movement and practical size depth. A separate standard/+ hypothesis explores future comparable silhouettes without adding current capsule SKUs or claiming proven demand. ScaleSight maintains analysis and specialist review; Understatement retains buying and commercial decisions.

Source A is the prior NATURANA technical specification. Source B is the supplied Understatement business concept. The new master prompt controls Understatement copy, routes, composition, size-depth and scenario values. No research or dataset regeneration was performed.

01. Purpose and Commercial Objective

Application: ScaleSight × Understatement

Workspace: Size Curve Planning

Context: NATURANA × Understatement Capsule

Primary proposition: “Understand what is driving each size - before deciding how deep to buy it.”

Core management question: “Once demand arrives as XS / S / M / L, what fit demand is actually sitting inside those buckets - and should it change the next size curve?”

The demo must help Marie / Understatement realise: “Our alpha-size demand contains more information than the size label shows.”

Then: “If we understand the fit cohorts inside each alpha size, we can make better size-depth decisions across future comparable collections.”

It is a managed planning concept showing: historical fit structure / + / alpha-size demand / + / returns / + / exchanges / + / inventory / + / forward demand / + / size-curve learning / + / merchandise / supply-chain planning logic / + / ScaleSight specialist review

leading to: BUY DEEPER / REPLENISH / HOLD / WATCH / INVESTIGATE / REDUCE NEXT BUY

The workspace is only the interface. · ScaleSight operates the planning layer.

It is NOT: - a customer size converter / - a fit quiz / - a bra-fitting application / - a returns dashboard / - a generic BI dashboard / - forecasting SaaS / - an inventory SaaS product / - a rigid size-planning application / - a tool the Understatement team must babysit / - a claim that ScaleSight knows the correct customer size / - a claim that the collaboration proves + size demand / - a universal Understatement size curve

02. Understatement-Specific Problem Definition

The collaboration contains: traditional NATURANA band/cup products

traditional numeric bottoms · and Understatement-style alpha-sized products.

Understatement already sees a commercial result such as: “M sold.”

The planning question becomes: “What kind of M demand is it?”

Possible contributors may include synthetic planning cohorts such as: 75A-75B-type demand

75C-75D-type demand · 80A-80B-type demand · adjacent fit cohorts · customers exchanging from L

customers whose support needs may later be relevant to Understatement’s existing + architecture

The objective is NOT to convert each customer.

The objective is to understand enough about the commercial signal to improve inventory depth.

03. Source-of-Truth and Data Classification

The specification must distinguish: [PUBLIC FACT]

Size-curve variance
Matching-set risk
Size-depth allocation
Projected inventory
Scenario outputs

[ANALYST INTERPRETATION]

Why the signal matters
Whether it is reliable
Whether deeper inventory is justified
Whether a size should be watched
What should be reviewed next

Short badge: ILLUSTRATIVE DATA

Full tooltip / methodology copy: “Product, size and catalog information is based on publicly available information. Sales, inventory, returns, exchanges, costs, forecasts, fit-cohort compositions and recommendations are synthetic assumptions created solely to demonstrate the ScaleSight planning workflow.”

Also state: “Synthetic fit-cohort mappings are planning assumptions, not customer-facing fit guidance.”

04. Eight-Product Capsule Structure

05. Complete 85-Variant Public Catalog

Use the Understatement public SKU and shared public barcode from SOURCE A as the canonical variant identifiers.

Do not invent missing NATURANA internal SKUs.

Use: publicSku / barcode / demoVariantId

If a NATURANA SKU was explicitly observed in SOURCE A, it may remain metadata.

Otherwise: naturanaPublicSku = null

8 weeks

Alternative horizons:

4 / 8 / 13 weeks

Next planning review:

Monday · 5 October 2026

Currency:

EUR

Demo classification:

Illustrative Planning Concept

08. Embedded Planning Story

The collaboration contains: traditional NATURANA band/cup products

traditional numeric bottoms · and Understatement-style alpha-sized products.

Understatement already sees a commercial result such as: “M sold.”

The planning question becomes: “What kind of M demand is it?”

Possible contributors may include synthetic planning cohorts such as: 75A-75B-type demand

75C-75D-type demand · 80A-80B-type demand · adjacent fit cohorts · customers exchanging from L

customers whose support needs may later be relevant to Understatement’s existing + architecture

The objective is NOT to convert each customer.

The objective is to understand enough about the commercial signal to improve inventory depth.

Preserve: 85 variants monitored

09. Alpha-Composition Model

This is Understatement-specific. · It is SYNTHETIC. · It must never be presented as factual customer-fit data.

Use the following illustrative composition for M: 75A-75B-type cohort: / 18%

75C-75D-type cohort:

34%

80A-80B-type cohort:

29%

Other adjacent fit cohorts:

19%

Total:

100%

Display label: ILLUSTRATIVE PLANNING COMPOSITION

Tooltip: “This composition is synthetic and is used only to demonstrate how a planning model could decompose commercial alpha-size demand into underlying fit cohorts.”

Main insight: “Demand from the 75C-75D-type cohort is contributing more strongly to M than the initial planning translation expected.”

10. Common Size-Curve Model

Use these exact values throughout the app.

INITIAL PLANNING CURVE

XS 9% S 18% M 24% L 25% XL 13% XXL 7% 3XL 4%

Total:
100%

GROSS EARLY-LAUNCH MIX

XS 7% S 17% M 31% L 26% XL 10% XXL 6% 3XL 3%

FIT-ADJUSTED COMMERCIAL MIX

XS 7.5% S 17.5% M 33.0% L 22.0% XL 10.5% XXL 6.0% 3XL 3.5%

Total:
100%

Canonical insight: M moves from 24% initial planning share to 33% fit-adjusted share.

Difference: +9 percentage points

L moves from 25% initial planning share to 22% fit-adjusted share.

Difference: -3 percentage points

Size	Initial %	Gross %	Fit-adjusted %
XS	9	7	7.5
S	18	17	17.5
M	24	31	33
L	25	26	22
XL	13	10	10.5
XXL	7	6	6
3XL	4	3	3.5

Display:
128 vs plan

Decision:
BUY DEEPER

12. Matching-Set Planning

Use the same matching-set relationships from SOURCE A: Dark Leo / Micro Mesh Padded Bra / ↔ / Micro Mesh Midi Hipster

- Plum
- Micro Mesh Underwired Bra
- ↔
- Micro Mesh Midi Hipster
- Candy Pink
- Opaque Triangle Scoop Bralette
- ↔
- Opaque Mesh Midi Briefs
- Cherry
- Opaque Mesh Balconette
- ↔
- Opaque Mesh Midi Briefs

Use synthetic set attach-rate assumption: 62%

Do not imply it is factual.

Canonical risks: CANDY PINK M

- Top WOC:
2.0 weeks
- Bottom WOC:
1.8 weeks
- Status:
SET RISK

CHERRY M

- Top WOC:
2.2 weeks
- Bottom WOC:
1.7 weeks
- Status:
SET RISK

Understatement-specific interpretation: “A stronger top size curve only creates value if the matching bottom can support it.”

13. Size-Depth Planning

The merchandising output is NOT primarily “where should the next €50K go?”

The hero merchandising question is: “How deep should the next size curve be?”

Use an illustrative buy of: 1,000 UNITS

INITIAL SIZE CURVE

XS:
90 units

S: 180

M: 240

L: 250

XL: 130

XXL: 70

3XL: 40

Total:
1,000

UPDATED FIT-ADJUSTED CURVE

XS: 75

S: 175

M: 330

L: 220

XL: 105

XXL: 60

3XL: 35

Total:
1,000

Highlight: M: / 240 → 330

+90 units

L: 250 → 220

-30 units

IMPORTANT: The UI must explicitly say:

“This does not mean every future Understatement style should use this curve.”

ScaleSight analyst copy: “Use the updated curve as one input alongside silhouette, support level, historical analogs, inventory position and upcoming commercial context.”

Size	Initial units	Updated units	Change
XS	90	75	-15
S	180	175	-5
M	240	330	90
L	250	220	-30
XL	130	105	-25
XXL	70	60	-10
3XL	40	35	-5

14. Standard vs + Opportunity Model

This is a UNIQUE UNDERSTATEMENT PAGE. · The collaboration itself does NOT prove + size demand. · Do not claim that it does. · The page explores a PLANNING HYPOTHESIS.

Eyebrow: SUPPORT OPPORTUNITY

H1: Is broad alpha demand hiding a support opportunity?

Subheading: “Where the fit mix inside M and L shifts toward fuller-cup cohorts, that can become a signal worth testing against Understatement’s existing + size architecture.”

Permanent badge: ILLUSTRATIVE PLANNING HYPOTHESIS

Use this canonical synthetic scenario: Current 1,000-unit fit-adjusted standard curve:

XS 75 S 175 M 330 L 220 XL 105 XXL 60 3XL 35

M + L combined:
550 units

Hypothetical planning test: 110 of those 550 M/L units become candidates for + architecture testing.

That equals: 20% of M/L capacity

Hypothetical test curve: XS: / 75

S: 175

M: 280

M+: 80

L: 160

L+: 30

XL: 105

XXL: 60

3XL: 35

Total:
1,000

This is NOT a recommendation for the current capsule. · It is a scenario for a future comparable silhouette.

Exact analyst copy: “The current collaboration does not prove M+ or L+ demand. This scenario simply shows how a growing fuller-cup signal inside standard M/L demand could be quantified before committing a future assortment.”

Decision: INVESTIGATE

Management question: “Is the signal strong enough to justify test capacity in + sizing for a future comparable silhouette?”

16. PAGE 1 - WEEKLY SIZE CURVE BRIEF

Route: /

Eyebrow: UNDERSTATEMENT × NATURANA

H1: Weekly Size Curve Brief

Subheading: “Which sizes are genuinely gaining demand, what fit signals are changing, and where the next buy may need more or less depth.”

Top metrics: 85 / Collaboration variants monitored

7

Size-curve changes under review

2

Alpha sizes changing materially

18

Variants needing planning action

Moderate

Fit-cohort confidence

PRIORITY 1

Title: M · Across Alpha Styles

Badge: BUY DEEPER

What changed: “Fit-adjusted M demand is running 9 percentage points above the initial planning curve.”

Why it matters: “M is receiving both stronger direct demand and net size movement from L.”

Recommended action: “Increase M weighting in the next comparable alpha-size buy.”

Decision required: “Approve deeper M planning while continuing to monitor whether the shift holds across another planning cycle.”

CTA: Review M Demand

PRIORITY 2

Title: Cherry · L

Badge: INVESTIGATE

What changed: “L has the strongest gross sales in the Cherry balconette, but its retained-demand signal is materially weaker after returns and exchanges.”

Why it matters: “Gross L sales are 34 units, but retained demand is only 25. Four of six exchange-outs move into M.”

Recommended action: “Do not deepen L solely on gross sell-through. Maintain current availability and review another cycle of retained demand.”

Decision required: “Hold incremental L depth.”

CTA: Review Fit Movement

PRIORITY 3

Title: 75C-75D Fit Cohort

Badge: CURVE SHIFT

What changed: “The initial planning translation expected 55% of this cohort in M and 45% in L. Early behaviour is running at 66% M / 34% L.”

Why it matters: “The change is large enough to alter the commercial size curve for future comparable silhouettes.”

Recommended action: “Increase M weighting in the next planning cycle.”

Decision required: “Approve revised M/L planning weights.”

CTA: Review Cohort Learning

PRIORITY 4

Title: M Matching Sets

Badge: SET RISK

What changed: “Candy Pink M and Cherry M briefs have less current cover than their matching tops.”

Why it matters: “A stronger M top curve cannot convert fully if matching bottoms become constrained first.”

Recommended action: “Plan top and bottom depth together when increasing M.”

Decision required: “Protect M set availability in the next allocation.”

CTA: Review Set Coverage

WHAT CHANGED SINCE LAST REVIEW

Show exactly seven items: 1. / M fit-adjusted share moved to 33% versus 24% initial plan.

2.
Cherry M became stronger than Cherry L on retained demand.
3.
Cherry L exchange-out rate reached 18%.
4.
75C-75D behaviour moved toward M.
5.
Candy Pink M brief cover fell to 1.8 weeks.
6.
Cherry M brief cover fell to 1.7 weeks.
7.
Two matching sets now require coordinated M planning.

17. PAGE 2 - WHAT IS INSIDE AN ALPHA SIZE?

Route: /alpha-composition

Eyebrow: ALPHA COMPOSITION

H1: What is actually inside M?

Subheading: “Alpha sizes simplify the customer experience. For inventory planning, they can also hide several different fit cohorts inside one commercial size.”

Hero visual: A large M circle / block.

Under it show: 75A-75B-type fit / 18%

75C-75D-type fit

34%

80A-80B-type fit

29%

Other adjacent cohorts

19%

Total:

100%

Permanent label: ILLUSTRATIVE PLANNING COMPOSITION

Secondary chart: INITIAL EXPECTED M COMPOSITION / vs / EARLY LAUNCH M COMPOSITION

Use a stacked bar or two horizontal composition bars. · Do not invent additional public facts.

The exact early composition may use the canonical composition above.

The initial comparison should visually communicate that the 75C-75D contribution is stronger than expected.

If an explicit initial composition is needed for the chart, use this SYNTHETIC planning baseline:

75A-75B: 22%

75C-75D: 27%

80A-80B: 31%

Other:

20%

Total:

100%

Early: 18% / 34% / 29% / 19%

Total:

100%

Exact insight card: “The 75C-75D-type cohort is contributing 34% of M demand versus a 27% initial planning assumption.”

Difference: +7 percentage points

ScaleSight observation: “The value is not assigning a customer a hidden bra size. The value is understanding whether the commercial mix inside M is changing enough to alter buying depth.”

CTA: See the Size Curve

18. PAGE 3 - ALPHA SIZE CURVE INTELLIGENCE

Route: /size-curve

Eyebrow: SIZE CURVE INTELLIGENCE

H1: One size curve. Three different signals.

Subheading: “Compare the initial planning assumption, gross launch demand and demand customers actually retain after returns and exchanges.”

Required chart: Grouped bar chart or three-series line/bar chart.

X-axis: XS / S / M / L / XL / XXL / 3XL

Series: Initial Planning Curve

Gross Launch Mix · Fit-Adjusted Commercial Mix

Values: XS: / 9 / 7 / 7.5

S: 18 / 17 / 17.5

M: 24 / 31 / 33

L: 25 / 26 / 22

XL: 13 / 10 / 10.5

XXL: 7 / 6 / 6

3XL: 4 / 3 / 3.5

Y-axis: Share of demand (%)

Primary insight card: M / 24% → 33%

+9 pts

Secondary insight: L / 25% → 22%

-3 pts fit-adjusted

ScaleSight interpretation: “L looks broadly healthy if gross demand is used. Once returns and exchanges are incorporated, the retained-demand signal is weaker. M moves in the opposite direction.”

Confidence: MODERATE

Tooltip: “Confidence remains Moderate because the observation window is short and several fit relationships are still being learned.”

CTA: Inspect Fit Movement

19. PAGE 4 - FIT MOVEMENT

Route: /fit-movement

Eyebrow: RETAINED DEMAND

H1: Where is size demand moving?

Subheading: “Gross sales show what was purchased first. Retained demand helps show where customers actually stay.”

Hero flow: L / → / SIZE MOVEMENT / → / M

SCALESIGHT ANALYSIS

RECOMMENDED DECISION

ASSUMPTIONS

Use Cherry L as the canonical detailed drawer example.

Exact copy: “Cherry L has the strongest gross launch sales in the style, but six customers have exchanged out of the size and four moved into M. The retained-demand signal is therefore materially weaker than gross sell-through suggests.”

Recommendation: INVESTIGATE

“Hold additional L commitment for one review cycle. Do not reduce existing availability, but do not use gross sales alone to justify a deeper next buy.”

Decision required: “Review again after another week of retained-demand data.”

21. PAGE 6 - SIZE DEPTH PLANNING

Route: /size-depth

Eyebrow: NEXT SIZE CURVE

H1: How deep should the next size curve be?

Subheading: “Turn retained demand into a practical size-depth decision without assuming one universal curve fits every style.”

Main scenario: ILLUSTRATIVE 1,000-UNIT BUY

Required chart: Initial Size Depth / vs / Updated Fit-Adjusted Size Depth

Initial: XS 90 / S 180 / M 240 / L 250 / XL 130 / XXL 70 / 3XL 40

Updated: XS 75 / S 175 / M 330 / L 220 / XL 105 / XXL 60 / 3XL 35

Primary highlight: M

240 → 330 · +90 units

Secondary highlight: L

250 → 220 · -30 units

Required warning: “This does not mean every future Understatement style should use this curve.”

ScaleSight recommendation: “Use the updated curve as one input alongside silhouette, support level, historical analogs, inventory position and upcoming commercial context.”

Show planning-context cards: Silhouette

Support Level · Historical Analog · Current Inventory · Launch Signal · Upcoming Commercial Events

Decision card: “Use deeper M as the current planning direction, but preserve style-specific judgment rather than applying a universal curve.”

CTA: Test Another Scenario

22. PAGE 7 - STANDARD VS + OPPORTUNITY

Route: /plus-opportunity

Eyebrow: SUPPORT OPPORTUNITY

H1: Is broad alpha demand hiding a support opportunity?

Subheading: “Where the fit mix inside M and L shifts toward fuller-cup cohorts, that can become a signal worth testing against Understatement’s existing + size architecture.”

Badge: ILLUSTRATIVE PLANNING HYPOTHESIS

Explain clearly: THE CURRENT COLLABORATION DOES NOT PROVE + DEMAND.

Show current fit-adjusted 1,000-unit curve: XS 75 / S 175 / M 330 / L 220 / XL 105 / XXL 60 / 3XL 35

M + L:

550 units

Hypothetical test: 110 units

20% of M/L capacity

could be tested against + architecture in a FUTURE comparable silhouette.

Use resulting 1,000-unit curve: XS 70 / S 170 / M 360 / L 210 / XL 100 / XXL 55 / 3XL 35

Total:

1,000

Primary change: M: / 330 → 360

Set risks:

3

Recommendation: “Protect additional M depth across both the top and matching bottom rather than increasing the top in isolation.”

FIT FRICTION PRESET

L exchange rate:

+5 percentage points

Use illustrative fit-adjusted curve: XS 75 / S 175 / M 350 / L 190 / XL 110 / XXL 60 / 3XL 40

Total:

1,000

Canonical business result: L fit-adjusted demand: / -12%

M retained demand:

+6%

Recommendation: “Reduce incremental L commitment and preserve capacity for M until the fit signal stabilises.”

FULLER-CUP SHIFT PRESET

Use the hypothetical future test curve: XS 75 / S 175 / M 280 / M+ 80 / L 160 / L+ 30 / XL 105 / XXL 60 / 3XL 35

Total:

1,000

+ test capacity: 110 units

20% of M/L capacity

Recommendation: “Do not treat this as a buy instruction. Use it to quantify the capacity that could be tested if fuller-cup evidence strengthens across additional launches.”

SUPPLIER DELAY PRESET

Lead time:
+2 weeks

Preserve the canonical SOURCE A operational result: Immediate actions: / 26

Matching-set risks:
4

ScaleSight interpretation: “The lead-time delay increases the operational importance of low-cover M variants because the business has less time to recover before the next receipt.”

Do not invent additional euro impacts if they are not supplied.

EVERY SCENARIO PANEL MUST SAY: Illustrative assumption-based scenario

24. PAGE 9 - FORECAST LEARNING

Route: /forecast-learning

Eyebrow: LAUNCH LEARNING

H1: Every launch teaches the next size curve.

Subheading: “The value is not the first translation. The value is continuously updating the commercial curve as retained demand becomes clearer.”

Required table: Historical Cohort / Initial Planning Weight / Early Illustrative Behaviour / Planning Change

Use exact canonical cohort values already supplied.

Hero example: 75C-75D

55% M / 45% L

→

66% M / 34% L

Recommendation: Increase M weighting

Second: 80A-80B

50 / 50 · → · 58 / 42 · Moderate M uplift

Third: 80C-80D

60% L / 40% XL

→

51% L / 49% XL

Raise XL assumption

Analyst copy: “The value is not the initial translation itself. The value is continuously updating the commercial size curve as retained demand becomes clearer - and carrying that learning into future comparable silhouettes.”

Confidence: MODERATE

Why not High?

“Short launch window, limited observations in tail sizes and continuing exchange behaviour.”

Cohort	Initial	Early behaviour	Planning change
75C-75D	55% M / 45% L	66% M / 34% L	Increase M weighting
80A-80B	50% M / 50% L	58% M / 42% L	Moderate M uplift
80C-80D	60% L / 40% XL	51% L / 49% XL	Raise XL assumption
85A-85B	35% L / 65% XL	37% L / 63% XL	No material change
85C-85D	60% XL / 40% XXL	57% XL / 43% XXL	No material change
90C-90D	65% XXL / 35% 3XL	62% XXL / 38% 3XL	Keep under review

25. PAGE 10 - MANAGED INTELLIGENCE

Route: /managed-intelligence

This page is commercially critical.

Eyebrow: MANAGED BY SCALESIGHT

H1: A planning layer behind the size curve.

10. MONITOR OUTCOME

WHAT SCALESIGHT HANDLES

Copy: “ScaleSight maintains the analytical layer, refreshes the size-curve and inventory planning logic, monitors exceptions, runs scenarios and interprets the operational trade-offs.”

WHAT UNDERSTATEMENT DECIDES

Copy: “Understatement retains control of buy quantities, assortment structure, supplier commitments and the final commercial decisions.”

YOUR SCALESIGHT PLANNING SPECIALIST

Do not invent a fake employee name.

Copy: “A dedicated ScaleSight planning specialist reviews the analytical output through a merchandise and supply-chain planning lens, separates meaningful changes from launch noise, incorporates business context and prepares management-ready recommendations.”

Secondary: “Supported by ScaleSight’s data-science models and planning logic.”

Strong callout: ANALYSIS MAINTAINED BY SCALESIGHT. / DECISIONS MADE WITH UNDERSTATEMENT.

Supporting copy: “The team does not need another dashboard to interpret. ScaleSight keeps the planning layer current and brings forward the exceptions, scenarios and recommendations that matter.”

26. PAGE 11 - ASSUMPTIONS & CUSTOMISATION

ForecastLearningTable / /forecast-learning	Six cohort learning rows; props: canonical values and exact copy from relevant page	Keyboard-operable controls; visible focus; text labels; stack on tablet/mobile. Render only supplied values and specified page interaction; no new recommendations. Acceptance: matches the page contract and data classification.
AnalystRecommendationPanel / Planning routes	Specialist interpretation / override; props: canonical values and exact copy from relevant page	Readable text; labelled values; responsive stacking. Render only supplied values and specified page interaction; no new recommendations. Acceptance: matches the page contract and data classification.

Component / route	Purpose / primary props	Behaviour / interaction / acceptance
ManagedPlanningWorkflow / /managed-intelligence	Ten-step managed cycle; props: canonical values and exact copy from relevant page	Readable text; labelled values; responsive stacking. Render only supplied values and specified page interaction; no new recommendations. Acceptance: matches the page contract and data classification.
PlanningSpecialistCard / /managed-intelligence	Human planning review; props: canonical values and exact copy from relevant page	Readable text; labelled values; responsive stacking. Render only supplied values and specified page interaction; no new recommendations. Acceptance: matches the page contract and data classification.
AssumptionTable / /assumptions	Source classification; props: canonical values and exact copy from relevant page	Keyboard-operable controls; visible focus; text labels; stack on tablet/mobile. Render only supplied values and specified page interaction; no new recommendations. Acceptance: matches the page contract and data classification.
CustomizationPanel / /assumptions	Configurable wider planning scope; props: canonical values and exact copy from relevant page	Readable text; labelled values; responsive stacking. Render only supplied values and specified page interaction; no new recommendations. Acceptance: matches the page contract and data classification.

35. State Contract

Define:

```
interface ScenarioState {
  mode:
    | "BASE"
    | "M_ACCELERATION"
    | "FIT_FRICTION"
    | "FULLER_CUP_SHIFT"
    | "SUPPLIER_DELAY";

  overallDemandUpliftPct: number;

  mDemandAdjustmentPct: number;

  lDemandAdjustmentPct: number;

  returnRateAdjustmentPP: number;

  exchangeRateAdjustmentPP: number;

  leadTimeAdjustmentWeeks: number;

  plannedBuyUnits: number;

  plusMigrationPct: number;

  setAttachRatePct: number;

  launchExtensionEnabled: boolean;

  fitAdjustedDemandEnabled: boolean;
}
```

Base: overallDemandUpliftPct = 0

mDemandAdjustmentPct = 0 · lDemandAdjustmentPct = 0 · returnRateAdjustmentPP = 0 ·
exchangeRateAdjustmentPP = 0 · leadTimeAdjustmentWeeks = 0 · plannedBuyUnits = 1000 ·
plusMigrationPct = 0 · setAttachRatePct = 62 · launchExtensionEnabled = false ·
fitAdjustedDemandEnabled = true · RESET TO BASE PLAN must restore everything atomically.

36. UI Design System

Use premium ScaleSight design language.

The workspace should feel: executive

calm · analytical · fashion / merchandising aware · premium · high confidence · minimal · decision-oriented

Use: near-black / navy

ScaleSight electric blue · restrained purple accent · white/light analytical surfaces where appropriate · clear status colours

Avoid: generic AI imagery

robots · brains · neon overload · cheap gradients · fashion stock photography · overcrowded dashboards · tiny metrics · gratuitous glassmorphism · excessive animation

Primary viewport: 1440 × 900

Must work cleanly: 1280 × 720

Tablet: functional

Mobile: readable but secondary

No horizontal page scrolling on main desktop views. · Do not rely only on colour for risk. · Use badge text + icon.

BUY DEEPER

Blue

REPLENISH

Teal

INVESTIGATE

Amber

WATCH · Muted amber

REDUCE NEXT BUY

Rose / red

HOLD · Neutral grey

SET RISK

Purple / amber combination · Always include the text label.

Write like a senior merchandise-planning / operations consultant.

Use: size curve

depth · retained demand · fit movement · commercial signal · silhouette · support level · matching set · inventory cover · buy commitment · replenishment · launch learning · planning assumption · exception · merchandise decision

Avoid: AI-powered

unlock data · revolutionary · game-changing · magic · 10x · powerful platform · smart dashboard

37. Responsive Behaviour

Primary 1440 × 900; clean 1280 × 720; tablet functional; mobile readable but secondary. No horizontal page scrolling on main desktop views. Keep tables locally scrollable if needed; maintain exact column labels and accessible controls. No delayed demo animations.

38. Accessibility

Use text plus icon for every status; colour alone is insufficient. Label every chart series and axis, preserve readable values, and provide the underlying table. Filters and scenario controls need visible labels, keyboard access and focus states. The variant drawer must expose its title, close action and focus return to the invoking row. All disclaimers remain readable at supported widths.

39. Managed-Service UX Rules

Use small contextual cues in appropriate places: Reviewed by ScaleSight

Updated this planning cycle · ScaleSight recommendation · Planning assumption · Needs management decision · Monitoring next cycle · Do not put them on every card.

They should signal the difference between: system output

and · ScaleSight-reviewed recommendation.

Place this near the end of Managed Intelligence or Assumptions.

Eyebrow: FROM CONCEPT TO LIVE PLANNING

H2: Build the planning layer around Understatement's actual business.

Copy: "This example uses public product structure and illustrative operating assumptions.

A live ScaleSight engagement would connect the same planning logic to Understatement's actual sales, inventory, returns, exchanges, purchase orders, supplier timing and commercial context - then our team would maintain the analysis and work with your team on the recurring decisions that matter."

CTA: Discuss an Understatement Planning Pilot

Secondary: See What Could Be Customised

Do not make every page promotional.

40. Public-Safety Rules

Short badge: ILLUSTRATIVE DATA

Full tooltip / methodology copy: “Product, size and catalog information is based on publicly available information. Sales, inventory, returns, exchanges, costs, forecasts, fit-cohort compositions and recommendations are synthetic assumptions created solely to demonstrate the ScaleSight planning workflow.”

Also state: “Synthetic fit-cohort mappings are planning assumptions, not customer-facing fit guidance.”

41. Five-Minute Demo Script

Time	Screen	Action	Presenter language	Takeaway
0:00-0:35	Weekly Brief	Open priorities	The NATURANA collaboration creates an interesting planning question from Understatement's side. Once demand arrives as S, M or L, you know which commercial size sold - but not necessarily what fit demand is sitting inside it.	Fit demand within alpha
0:35-1:05	Alpha Composition	Inspect M composition	So instead of treating M as one homogeneous bucket, we can use the richer fit structure behind the collaboration to understand what may actually be driving it.	M is not homogeneous
1:05-1:35	Size Curve	Compare three curves	The first meaningful signal here is that M has moved from 24% of the initial planning curve to 33% of fit-adjusted demand.	M +9 pts
1:35-2:10	Fit Movement	Inspect Cherry L and M	This is why gross sales alone can be misleading. Cherry L looks strongest on the surface - 34 sales versus 30 in M. But after returns and exchanges, L retains 25 units while M retains 31.	Gross and retained differ
2:10-2:40	SKU Planning	Show 85 variants and actions	The planning layer then carries that logic across the complete 85-variant collaboration, rather than treating this as a one-product analysis.	Full assortment monitored
2:40-3:10	Size Depth	Compare 1,000-unit depths	Now we can translate the signal into a merchandising decision. On an illustrative 1,000-unit buy, M would move from 240 units to 330 - but only as a planning input, not a universal curve for every style.	M 240 to 330
3:10-3:40	+ Opportunity	Inspect future + hypothesis	And because Understatement already has a + architecture, we can also test whether some of the demand currently sitting inside broad M/L buckets is strong enough to justify future + capacity. This page is deliberately a hypothesis, not a fit recommendation.	Hypothesis, not proof
3:40-4:10	Scenario	Switch canonical presets	Before committing the buy, the team can stress-test what happens if M keeps accelerating, L exchange pressure increases, supplier timing changes or fuller-cup signals strengthen.	Test before buying
4:10-4:35	Forecast Learning	Inspect cohort updates	The goal is not to get the first curve perfectly right. It's to learn from every launch and continuously improve the next one.	Learn each launch
4:35-5:00	Managed Intelligence	Show analyst review and ownership	And this is the important part. Understatement would not be buying another dashboard to interpret. ScaleSight keeps the planning layer current, reviews what is changing and brings forward the decisions that deserve attention.	Managed planning

Close: "This collaboration is just one example. A live workspace could be shaped around Understatement's wider assortment, standard/+ sizing, launches, matching sets and actual buying process."

42. Self-Guided Prospect Flow

A founder / operator opening the link without Arman should understand in approximately 3-5 minutes:

1.
Why broad alpha sizes can hide different fit demand.
2.
Why M is materially above the initial commercial curve.
3.
Why Cherry L gross sales are misleading.
4.
Why retained demand matters.
5.
How this changes size depth.
6.
Why matching sets matter.
7.
How standard/+ architecture can be explored without pretending demand is proven.
8.
How scenario planning works.
9.
How every launch can update the next curve.
10.
Why ScaleSight remains involved after the workspace is built.
11.
Why this is configurable beyond the collaboration.

43. QA Matrix

The final technical PDF must include a QA checklist.

PRODUCT DATA

Exactly 8 products · Exactly 85 public variants · No fabricated 90E · Correct Understatement SKUs · Correct barcodes · Correct size systems · Correct colours · Correct matching sets

UNDERSTATEMENT NARRATIVE

Understatement names primary · Alpha-composition framing present · M composition page present · Fit Movement page present · Size Depth page present · + Opportunity clearly hypothetical · No claim collaboration proves + demand

100%

SCENARIOS

Base curve correct · M Acceleration curve sums to 1000 · Fit Friction curve sums to 1000 · Fuller-Cup Shift sums to 1000 · Supplier Delay shows 26 actions / 4 set risks · Reset restores Base atomically

PUBLIC SAFETY

Illustrative Data badge visible · Synthetic fit mapping not described as customer guidance · + scenario marked hypothetical · No suggestion ScaleSight has Understatement private data · No suggestion this is already deployed at Understatement

MANAGED SERVICE

ScaleSight specialist review visible · ScaleSight handles analysis · Understatement retains decisions · Customisation page present · No self-service SaaS framing

Test area	Pass condition
Catalog	8 products, 85 unique SKUs/barcodes; 19 Plum bra sizes; no 90E; no scenario + categories in catalog.
Source preservation	All 85 operating rows match foundation; retain original WOC and final decisions.

Test area	Pass condition
Derived values	Cherry L 25; Cherry M 31; Candy Pink M 37; indices 86,119,128; 18% exchange-out; 67% L-to-M.
Composition	Initial 22/27/31/20 and early 18/34/29/19 both total 100; cohort change +7 pp.
Size curves	Initial, gross and fit-adjusted mixes total 100; M +9 pp; L -3 pp.
Depth	All five supplied 1,000-unit curves sum to 1,000; + test contains 110 units.
Scenarios	All five named presets match; supplier delay 26 actions and 4 risks; reset all base fields atomically.
UX	11 routes, filters, drawer, first 20 urgency-sorted variants, chart labels and responsive behaviour work.
Safety and service	Synthetic mappings and + assumptions labelled; specialist review visible; Understatement owns decisions.

SOURCE REVIEW REQUIRED: The canonical aggregate curves are not direct aggregates of the 85-row operating table; no population/weighting reconciliation is supplied. Preserve both. Incoming receipt dates, full exchange destination ledger, variant-specific confidence/expected demand and arbitrary-slider scenario coefficients are not supplied. Do not invent those inputs. The 110-unit + test specifies a 20% M/L capacity hypothesis but does not specify a universal per-size migration rule. The scenario curves and percentage impacts are separately canonical and must not be silently recomputed into different values.

44. Acceptance Criteria

The finished application should allow Marie / Understatement to understand:

1.
What demand may be hidden inside an alpha size.
2.
Why commercial alpha-size demand is not homogeneous.
3.
Why M has become more important.
4.
Why L gross sales can overstate retained demand.
5.
How exchanges change the buying interpretation.
6.
How the learning affects the next size curve.
7.
Why matching bottoms matter.
8.
How all 85 variants are being monitored.
9.
How standard/+ demand could be tested without claiming proof.
10.
How scenario planning changes the buy.
11.
Why the initial forecast is an assumption rather than certainty.
12.
Why human merchandise / supply-chain judgment matters.
13.
Why ScaleSight remains involved every planning cycle.
14.
How the planning layer could expand beyond this collaboration.

45. Definition of Done

The workspace is NOT finished merely because every route exists.

Ask: “Does this feel like NATURANA’s demo with a different logo?”

If yes:
revise.

Ask: “Does this feel like a generic dashboard?”

If yes:
revise.

Ask: “Does this imply we are trying to solve customer fitting?”

If yes:
revise.

Ask: “Does the + page imply demand has already been proven?”

If yes:
revise.

Ask: “Can Marie understand within two minutes why M and L should not be planned using gross sales alone?”

If no:
simplify.

Ask: “Can she see how this could improve future size-depth decisions?”

If no:
strengthen the merchandising narrative.

Ask: “Can she see why ScaleSight remains involved?”

If no:
strengthen Managed Intelligence.

The final experience should feel like: A MANAGED MERCHANDISE AND SIZE-PLANNING CAPABILITY BUILT AROUND THE BUSINESS.

Appendix D. M composition model

This is Understatement-specific. · It is SYNTHETIC. · It must never be presented as factual customer-fit data.

Use the following illustrative composition for M: 75A-75B-type cohort: / 18%

75C-75D-type cohort:

34%

80A-80B-type cohort:

29%

Other adjacent fit cohorts:

19%

Total:

100%

Display label: ILLUSTRATIVE PLANNING COMPOSITION

Tooltip: “This composition is synthetic and is used only to demonstrate how a planning model could decompose commercial alpha-size demand into underlying fit cohorts.”

Main insight: “Demand from the 75C-75D-type cohort is contributing more strongly to M than the initial planning translation expected.”

Appendix E. Size-curve tables

Use these exact values throughout the app.

INITIAL PLANNING CURVE

XS 9% S 18% M 24% L 25% XL 13% XXL 7% 3XL 4%

Total:
100%

GROSS EARLY-LAUNCH MIX

XS 7% S 17% M 31% L 26% XL 10% XXL 6% 3XL 3%

FIT-ADJUSTED COMMERCIAL MIX

XS 7.5% S 17.5% M 33.0% L 22.0% XL 10.5% XXL 6.0% 3XL 3.5%

Total:
100%

Canonical insight: M moves from 24% initial planning share to 33% fit-adjusted share.

Difference: +9 percentage points

L moves from 25% initial planning share to 22% fit-adjusted share.

Difference: -3 percentage points

Appendix F. Forecast-learning cohorts

Use these exact values: 75C-75D

Initial:

55% M / 45% L

Early illustrative behaviour:

66% M / 34% L

Action:

Increase M weighting

80A-80B

Initial:

50% M / 50% L

Early:

58% M / 42% L

Action:

Moderate M uplift

80C-80D

Initial:

60% L / 40% XL

Early:

51% L / 49% XL

Action:

Raise XL assumption

85A-85B

Initial:

35% L / 65% XL

Early:

37% L / 63% XL

Action:

No material change

85C-85D

Initial:

60% XL / 40% XXL

Early:

57% XL / 43% XXL

Action:

No material change

90C-90D

Initial:

65% XXL / 35% 3XL

Early:
62% XXL / 38% 3XL

Action:
Keep under review

Overall confidence: MODERATE

Reason: The launch observation window remains short and several fit relationships are still being learned.

Appendix G. Size-depth models

The merchandising output is NOT primarily “where should the next €50K go?”

The hero merchandising question is: “How deep should the next size curve be?”

Use an illustrative buy of: 1,000 UNITS

INITIAL SIZE CURVE

XS:

90 units

S: 180

M: 240

L: 250

XL: 130

XXL: 70

3XL: 40

Total:

1,000

UPDATED FIT-ADJUSTED CURVE

XS: 75

S: 175

M: 330

L: 220

XL: 105

XXL: 60

3XL: 35

Total:

1,000

Highlight: M: / 240 → 330

+90 units

L: 250 → 220

-30 units

IMPORTANT: The UI must explicitly say:

“This does not mean every future Understatement style should use this curve.”

ScaleSight analyst copy: “Use the updated curve as one input alongside silhouette, support level, historical analogs, inventory position and upcoming commercial context.”

Appendix H. + opportunity scenario

This is a UNIQUE UNDERSTATEMENT PAGE. · The collaboration itself does NOT prove + size demand. · Do not claim that it does. · The page explores a PLANNING HYPOTHESIS.

Eyebrow: SUPPORT OPPORTUNITY

H1: Is broad alpha demand hiding a support opportunity?

Subheading: “Where the fit mix inside M and L shifts toward fuller-cup cohorts, that can become a signal worth testing against Understatement’s existing + size architecture.”

Permanent badge: ILLUSTRATIVE PLANNING HYPOTHESIS

Use this canonical synthetic scenario: Current 1,000-unit fit-adjusted standard curve:

XS 75 S 175 M 330 L 220 XL 105 XXL 60 3XL 35

M + L combined:
550 units

Hypothetical planning test: 110 of those 550 M/L units become candidates for + architecture testing.

That equals: 20% of M/L capacity

Hypothetical test curve: XS: / 75

S: 175

M: 280

M+: 80

L: 160

L+: 30

XL: 105

XXL: 60

3XL: 35

Total:
1,000

This is NOT a recommendation for the current capsule. · It is a scenario for a future comparable silhouette.

Exact analyst copy: “The current collaboration does not prove M+ or L+ demand. This scenario simply shows how a growing fuller-cup signal inside standard M/L demand could be quantified before committing a future assortment.”

Decision: INVESTIGATE

Management question: “Is the signal strong enough to justify test capacity in + sizing for a future comparable silhouette?”

Appendix I. Scenario presets

Size curve: XS 75 / S 175 / M 330 / L 220 / XL 105 / XXL 60 / 3XL 35

Immediate planning actions:

18

Set risks:

2

Confidence:

Moderate

M ACCELERATION PRESET

M demand:

+10%

Use resulting 1,000-unit curve: XS 70 / S 170 / M 360 / L 210 / XL 100 / XXL 55 / 3XL 35

Total:

1,000

Primary change: M: / 330 → 360

Set risks:

3

Recommendation: “Protect additional M depth across both the top and matching bottom rather than increasing the top in isolation.”

FIT FRICTION PRESET

L exchange rate:

+5 percentage points

Use illustrative fit-adjusted curve: XS 75 / S 175 / M 350 / L 190 / XL 110 / XXL 60 / 3XL 40

Total:

1,000

Canonical business result: L fit-adjusted demand: / -12%

M retained demand:

+6%

Recommendation: “Reduce incremental L commitment and preserve capacity for M until the fit signal stabilises.”

FULLER-CUP SHIFT PRESET

Use the hypothetical future test curve: XS 75 / S 175 / M 280 / M+ 80 / L 160 / L+ 30 / XL 105 / XXL 60 / 3XL 35

Total:

1,000

+ test capacity: 110 units

20% of M/L capacity

Recommendation: “Do not treat this as a buy instruction. Use it to quantify the capacity that could be tested if fuller-cup evidence strengthens across additional launches.”

SUPPLIER DELAY PRESET

Lead time:

+2 weeks

Preserve the canonical SOURCE A operational result: Immediate actions: / 26

Matching-set risks:

4

ScaleSight interpretation: “The lead-time delay increases the operational importance of low-cover M variants because the business has less time to recover before the next receipt.”

Do not invent additional euro impacts if they are not supplied.

EVERY SCENARIO PANEL MUST SAY: Illustrative assumption-based scenario

Appendix J. Calculation formulas

Document these formulas exactly.

RETAINED DEMAND

retainedDemand =
grossSales
- returns
- exchangeOut
+ exchangeIn

EXCHANGE-OUT RATE

exchangeOutRate =
exchangeOut / grossSales

confirmedIncomingBeforeRequirementDate
)

PROJECTED INVENTORY

projectedInventory[t] =
openingInventory
+
cumulativeIncoming[t]
-
cumulativeForecastDemand[t]

SIZE DEPTH

sizeUnits =
totalPlannedUnits
×
selectedSizeShare

For the canonical 1,000-unit view: $\text{sizeUnits} = / 1000 \times \text{sizeShare}$

Appendix K. TypeScript contracts

Reuse the SOURCE A variant model but make Understatement naming primary.

Use an interface equivalent to: type DecisionAction = / | "BUY_DEEPER" / | "REPLENISH" / | "HOLD" / | "WATCH" / | "INVESTIGATE" / | "REDUCE_NEXT_BUY";

```
type Confidence =  
| "LOW"  
| "MODERATE"  
| "HIGH";
```

```
type SizeSystem =  
| "BAND_CUP"  
| "EU_NUMERIC"  
| "ALPHA";
```

```
interface Variant {  
  demoVariantId: string;  
  productId: string;  
  
  understatementProductName: string;  
  naturanaProductName: string;  
  
  colour: string;  
  productType: string;  
  matchingSetId: string;  
  
  sizeSystem: SizeSystem;  
  size: string;  
  
  band?: number;  
  cup?: string;  
  numericSize?: number;  
  alphaSize?: string;  
  
  publicSku: string;  
  barcode: string;  
  naturanaPublicSku?: string | null;  
  
  understatementPublicPriceEUR: number;  
  naturanaPublicPriceEUR?: number;  
  
  syntheticUnitCostEUR: number;  
  
  onHand: number;  
  incoming: number;  
  
  leadTimeWeeks: number;  
  safetyStockWeeks: number;  
  targetCoverWeeks: number;  
  
  grossLaunchSales: number;  
  returns: number;  
  exchangeOut: number;  
  exchangeIn: number;  
  
  forecastWeeklyUnits: number;  
  
  confidence: Confidence;  
  
  modelRecommendation: DecisionAction;  
  analystRecommendation: DecisionAction;  
  
  overrideType?: string;  
  analystReason?: string;
```

```
    matchingVariantId?: string;
  }

```

UNDERSTATEMENT-SPECIFIC OPTIONAL MODEL:

```
interface FitComposition {
  alphaSize: string;
  cohortLabel: string;
  initialSharePct: number;
  currentSharePct: number;
  confidence: Confidence;
  synthetic: true;
}

```

Derived fields must be calculated centrally: retainedDemand

exchangeOutRate · commercialDemandIndex · weeksOfCover · reorderGap · projectedInventory · setRisk

Define:

```
interface ScenarioState {
  mode:
    | "BASE"
    | "M_ACCELERATION"
    | "FIT_FRICTION"
    | "FULLER_CUP_SHIFT"
    | "SUPPLIER_DELAY";

  overallDemandUpliftPct: number;

  mDemandAdjustmentPct: number;

  lDemandAdjustmentPct: number;

  returnRateAdjustmentPP: number;

  exchangeRateAdjustmentPP: number;

  leadTimeAdjustmentWeeks: number;

  plannedBuyUnits: number;

  plusMigrationPct: number;

  setAttachRatePct: number;

  launchExtensionEnabled: boolean;

  fitAdjustedDemandEnabled: boolean;
}

```

Base: overallDemandUpliftPct = 0

mDemandAdjustmentPct = 0 · lDemandAdjustmentPct = 0 · returnRateAdjustmentPP = 0 ·
 exchangeRateAdjustmentPP = 0 · leadTimeAdjustmentWeeks = 0 · plannedBuyUnits = 1000 ·
 plusMigrationPct = 0 · setAttachRatePct = 62 · launchExtensionEnabled = false ·
 fitAdjustedDemandEnabled = true · RESET TO BASE PLAN must restore everything atomically.

Appendix L. Exact UI copy library

Sections 16-26 contain the complete exact copy library for all 11 routes. Global shell copy is in Section 15; persistent disclosure is in Sections 03 and 40; commercial endpoint copy is in Section 39. Use these exact strings, preserving their source role.

Use small contextual cues in appropriate places: Reviewed by ScaleSight

Updated this planning cycle · ScaleSight recommendation · Planning assumption · Needs management decision · Monitoring next cycle · Do not put them on every card.

They should signal the difference between: system output

and · ScaleSight-reviewed recommendation.

Appendix M. QA checklist

The final technical PDF must include a QA checklist.

PRODUCT DATA

Exactly 8 products · Exactly 85 public variants · No fabricated 90E · Correct Understatement SKUs · Correct barcodes · Correct size systems · Correct colours · Correct matching sets

UNDERSTATEMENT NARRATIVE
